OPSVIEW

OPERATIONAL INTELLIGENCE AT YOUR FINGERTIPS

With future challenges facing global trade, terminals need to be able to reduce friction within the terminal to maximize profits. While reporting can help you see overall trends, terminal managers need a way to identify problem areas in the terminal in real time, so that they can make quick decisions to improve productivity.

OpsView is a mobile application with real-time KPI dashboards for monitoring terminal operations, enabling terminal managers, shift managers, and supervisors to identify potential bottlenecks so that they can take corrective actions quickly. The next gen OpsView application uses Microsoft Power BI as the visualization tool and it includes intuitive dashboards for Waterside, Gate, and Yard, enabling users to quickly spot key metrics, such as Vessel Target, Long hook, GMPH, PMPH, truck turn time, and yard utilization. And as a part of the Navis Smart suite of applications, OpsView is decoupled from the N4 and Master Terminal TOS, which means it can be installed and upgraded independent of the TOS. Also, it's easily deployable on the cloud, which means lower maintenance costs.

Navis OpsView **Features**

Dashboards for Waterside, Gate, and Yard	Decoupled from the TOS	Mobile access	Deployable in the cloud

Which Gets **You**

Rich Real-Time Data
The OpsView dashboards provide easy-to-scan visualizations of performance in different parts of the terminal, with problem spots highlighted to grab your attention.

Easy Deployment
As long as your terminal is on N4 3.6 or later / Master Terminal 862.080 or later, you don't need to upgrade to get new OpsView features. OpsView updates are easy to download and install.

Lower Maintenance Costs
If you deploy OpsView in the Cloud, your maintenance overhead costs are negligible, and infrastructure can scale on demand.

Available by monthly subscription (includes M&S).

Technical **Requirements**

- Navis N4 3.6 and later
- Master Terminal 862.080 and later
- Android version 5 or above (Android Lollipop or above)
