

A photograph of a port terminal at sunset. A large orange gantry crane is positioned over a ship's deck, with a large pile of light-colored cargo (possibly sand or grain) being processed. The sky is a mix of orange, yellow, and blue. The ship's hull is visible on the right side.

MASTER TERMINAL

Solve the Complex Problem of Managing Mixed Cargo

Are you looking to attract more shippers to your port, to compete head on for business with bigger, better funded port operations? Master Terminal by Navis can be your game changer, enabling you to simplify operations and transform productivity.

A terminal operating system (TOS) for the agile port

The Master Terminal TOS solves the complex problem of managing a variety of cargo within one system, providing the agility you need to compete. Master Terminal has been designed to cater for all cargo types including containers, break-bulk, bulk, general cargo, Roll-On/Roll-Off (RORO), vehicles and logs, making it the TOS of choice for mixed cargo terminals.

Master Terminal is a powerful, easily configurable TOS accessible from the desktop or mobile device. It provides a single integrated, real-time view of all operations and data, allowing you to make decisions smarter and faster, resulting in improved productivity and operational efficiency.

Master Terminal Features

Single integrated platform to manage core terminal operating processes

Handles multiple cargo types

Operational planning including harbor, yard and vessel management

Strong integration capabilities via EDI and APIs

Financial data and invoicing support

Accessible anywhere on desktop or mobile devices

Configured to reflect a port's specific challenges

Backed by a team with a long history in the ports and shipping sector

An extremely stable solution capable of forming the core of your port's information systems, Master Terminal is flexible enough to meet your port's specific challenges.

Go live with confidence

Our proven implementation methodology has been developed with your needs in mind, providing an easy to follow implementation path with considerable guidance for your teams to deliver a successful Go Live. Our customized training solutions ensure your users are rapidly up to speed and able to make the most of the Master Terminal solution. With our on-site support at key points throughout the project, and an implementation record second to none in the industry, you can be assured that Master Terminal will be implemented with minimal disruption to your operations.

We are port people

Navis is backed by a dedicated team with unmatched experience in the global logistics industry, and unique expertise in container terminal, RORO, warehousing, container freight services and general cargo management.

24x7 support

Our support service is unique in the logistics industry. Master Care is more than just a helpdesk. Master Care is a comprehensive managed service that combines traditional 24x7 technical support with continuous live monitoring and active management of your installation, lifetime product maintenance, security monitoring, and resource usage analysis and capacity planning. With Master Terminal's experienced team maintaining nearly every aspect of your TOS server environment, you can be sure that your TOS remains available, reliable and secure. You will gain maximum benefit from a lower total cost of ownership.

Transform your business

For the growing, ambitious port, Master Terminal helps you compete hard for a shipper's business, no matter what port you are up against.

In one of the world's toughest industries, Master Terminal is the terminal operating system (TOS) that solves the complex problems of handling a variety of cargo types and gives you the ability to transform your operations and compete for new business.
